Nowy Styl products are manufactured in conformity with guidelines set forth in the European standards – EN and American ANSI BIFMA. The whole production process is carried out according to standards of the Quality Assurance System ISO 9001:2000.

In order to ensure their top quality, Nowy Styl products are tested for durability and safety in the company's internal laboratory and, additionally, in external research institutions, which is confirmed by relevant certificates. Quality control covers all stages of product creation: from designing a prototype, through every stage of production to the preparation for dispatch.

Nowy Styl chairs and armchairs have been approved for safety and have been granted a GS label by the LGA Institute in Nuremberg; they have also been positively evaluated for their ergonomic and hygienic quality by the Polish National Institute of Hygiene.

A contemporary man spends about 80 thousand hours in his whole life in a sitting position. This means that he would sit without a break for 9 years and 132 hours. This huge amount of time spent sitting makes a properly chosen and used chair the most important furniture item in our life.

For us, health of future users of Nowy Styl chairs is the top priority. That is why we focus our efforts on developing a product offer which would suit as much as possible individual style and work time patterns, as well as psychophysical features of different users.

Thanks to the great diversity of our chairs and armchairs, and motion systems applied in them, every potential user will find in Nowy Styl offer a chair fitting his size and body build, which will ensure a proper sitting position and reduce to the minimum the fatigue caused by long hours of work.

Nowy Styl chairs and armchairs manufacturing process involves only the use of such materials that do not pose any hazard to human health. We also care about the aesthetic side of our products so that they positively affect the user's mood by pleasant visual experiences.

WHY NOWY STYL PRODUCTS?

1 WIDE PRODUCT RANGE

2 CERTIFIED QUALITY

4 ERGONOMICS AND HEALTH

3 A EUROPEAN PRODUCT

5 PLEASURE OF USE

Nowy Styl products are created with different customers in mind. They satisfy tastes of buyers all over the world thanks to their diversity and proper quality, functionality and price ratio. Thanks to the diversity of the Nowy Styl product offer, the furniture can be used in different types of interiors: offices, conference and waiting rooms, gastronomic and residential facilities.

The Nowy Styl collection includes over 200 design lines of armchairs and chairs available in about 100 upholstery types, as well as tables and other elements of interior fittings, which make Nowy Styl the biggest and most comprehensive range of chairs in Europe.

Nowy Styl products are made in Europe and raw materials and components for their production come only from reliable suppliers. We cooperate with a large group of European designers and experts in the field of product construction and safety, ergonomics, technology and quality research. For manufacturing of our chairs we employ only adult and capable persons, providing them with fair working conditions and remuneration. As a result, we guarantee constant high quality of our products.

Nowy Styl products are made to bring joy to their users and to improve the comfort of everyday life by emphasizing the individual character of each interior. We cooperate with designers who represent different nationalities and design styles and we focus on the aesthetic side, comfort of use and functionality of our products, thanks to which our furniture offers an incredible diversity of styles, functions and fittings standards, so that everyone, regardless of their nationality, working style or taste, can find a chair for themselves.

Nowy Styl products are available to customers in every corner of the world. We make our best efforts to ensure efficient execution of any orders, no matter how large they are, packaged in the way chosen by buyers and delivered to any place of their choice.

We specialize in large batch orders. We completed a contract for 50,000 chairs for the Athens Olympics facilities in 2004, big contracts for the French Post and the French Ministry of Finance, for the Hungarian government and parliament, the Petrochemical Institute in the United Arab Emirates; we also supplied chairs for the European Council Summit, the Football World Cup in Germany in 2006, the Miss Universe Contest in Panama, to mention but a few. The sale of Nowy Styl products is carried out through the Group's 10 branches situated in the key points of Europe and a network of over 3,500 dealers on 6 continents.

Nowy Styl products are manufactured from environmentally friendly and – as much as possible – reused materials, therefore they are almost 100% recyclable.

In the manufacturing process we use FSC certified wood, which is a guarantee of the full legality and top quality of the material from which our products are made. Plastic elements are produced from regranulates obtained in recycling processes; metal elements are made from materials prepared by their manufacturers with the minimum amount of waste. We have production waste reused or we do it at our own facility; accordingly, plastic elements are transformed into regranulates utilised further in the manufacturing process and wood is used to produce heat needed in our furniture production.

In our everyday activities we follow the 3R principle: reduce (the amount of waste), reuse (reusable items), recycle (materials which can be used again in the production process).

WHY NOWY STYL PRODUCTS?

7 UNLIMITED AVAILABILITY ↑

9

RESPONSIBILITY TOWARDS THE ENVIRONMENT ↑

6 BALANCED PRICE ↓

8 ETHICS IN BUSINESS ↓

RESPONSIBILITY TOWARDS THE SURROUNDINGS ↓

10

The Nowy Styl brand means a guarantee of a balanced price. The prudent cost administration policy involving lean manufacturing, purchasing raw materials in large batches, rational waste management and many other similar activities, allows us to offer products which are always good value for money. That is why, the choice of our products is a guarantee of full satisfaction. Depending on the advanced functional and aesthetic solutions implemented in a furniture item, we offer a diversified product range at varied prices, affordable for everyone.

Nowy Styl products are made and supplied following ethical principles in relations with our customers, contractors and employees. The Company is against unfair competition, endeavouring to bring full and long-term satisfaction with our products, service and cooperation to each customer and user of our products.

This attitude has been appreciated many times, which is confirmed by the opinions of our business partners and tokens of recognition, such as: the Kisiel Prize *Nagroda Kisiela* – one of the Polish most prestigious prizes, received "for capitalism in good style" or the Caring Employer *Troskliwy Pracodawca* title, awarded by the leading Polish newspaper *Rzeczpospolita*, for "innovatory programme of employee development."

Nowy Styl products are created in the atmosphere of empathy with the society and with those in need. The company actively supports handicapped children and the healthcare facilities which need assistance. Every year we provide financial and organisational aid to the youngest children in need by:

- funding maintenance grants for them and providing them with support in their education;
- organising New Year's balls and holiday trips;
- furnishing children's homes and hospitals;
- vocational training and job offers for the skilled ones.

A customer who purchases Nowy Styl furniture contributes to the support provided to the youngest and to the improvement of their life standard, as every Nowy Styl item means €1 spent on a book, a maintenance grant or a dreamed-of holiday trip.

HOW TO SELECT THE RIGHT CHAIR?

STEP 1.

Find out how long the person is going to spend sitting a day and then suggest a proper type of a chair according to the following rules:

working time up to 2 hours

Suggest a chair with a swiveling base, adjustable seat height and a stable support of the lumbar part of the spine. Any mechanism from Nowy Styl offer will suit the needs in this case.

working time up to 4 hours

Suggest a chair with the functions as above plus:

- adjustable back height,
- adjustable seat depth,
- adjustable back tilting.

The above functions are ensured by the following mechanisms: *Active-1*, *CPT* and *Kontakt*.

Moreover make sure that the chair's back reaches at least the person's shoulder blades.

working time over 4 hours

Suggest a chair with the richest range of ergonomic solutions – the chair that enables “dynamic seating” throughout the whole working time thanks to the following functions:

- synchronized movement of the back and the seat,
- *permanent contact* – continuous support of the person's back regardless his or her current position
- easy tilting – comfortable and ergonomic position of the body,
- regulation of the tilting force of the back and the seat,
- *Anti-shock* function – securing against the chair's back hitting the person's back after the release of the blockade.

The above functions are ensured by the following mechanisms: *Active-1*, *Active-IN*, *Epron Synchron*, *Epron Synchron Plus*, *I-marc 840*, *Duetto Synchron/MPD 165* and *Tatto*.

Moreover, the chair should have a high back allowing for the whole person's back to be supported; shaped loins support and armrests of adjustable height. In this case a headrest is also recommended.

STEP 2.

Select the chair suiting the type of the person's body posture:

A person should always choose a chair matching his or her posture. A person of a massive body posture and significant height needs a chair with a wide seat and a high back. On the contrary, chairs with small seats, lower backs and narrow distance between armrests are in fact better choice for slimmer and shorter people.

STEP 3.

Explain how to set the chair in the right way:

Ideal back – it should support the back up to the shoulder blades at least; its convex part found on the lumbar level should ensure support for the lumbar part of the spine.

Up&down function – found in some chairs, enables adjusting the back height and the lumbar support height in an amazingly easy way, without standing up.

Angle of back's tilting – it should be adjusted to the currently performed work. In each position the back should support the lumbar part.

Dynamic back – ensures stable support for the spine while moving in the sitting position. It is indispensable while working over four hours. It always allows for keeping the right position while working, relaxing and free “rocking”.

Supporting forearms on armrests – it reduces burdening of the spine and shoulders. Armrests with the conveniently adjustable height ensure an angle of 90° between the shoulder and the forearm. Adjustable armrests allow for adjusting their height to the height of the user; the horizontal move of the covers (front-back) enables to suit the distance between the armrest and the desk where the user keeps their forearms while working.

Convenient seat height – the seat height should enable stable position of the feet on the floor and a parallel position of the thighs to the floor. With optimal regulation of the seat height, the angle between the thigh and the shank should be 90°.

Optimal seat depth – it guarantees support for 2/3 up to 3/4 of the thighs' length. Between the front edge of the seat and the popliteal area there should be a distance of 1-2 centimetres that prevents tiredness and leg ailments to occur. Additional option of a adjustable seat depth allows for adjusting it to the needs of nearly all potential users.

OFFICE CHAIRS MOVING SYSTEMS

Chairs are a crucial component to achieve the perfect posture while working at the desk. They should be chosen according to the size and shape of the user's body, as well as the functions they are to perform. Besides, when choosing a chair a special attention should be paid to the selection of a movement system – a “heart” of each office chair, determining its adjustment to the type and most of all – the length of working time of each individual. Nowy Styl offers chairs with 3 levels of movement systems provided by a selection of mechanisms, including:

SK SYSTEM KOMFORT a movement system offering a basic support during the movement and preventing back problems when sitting in an operative chair. It is provided by *CPT* and *Kontakt* mechanisms – both in permanent contact type.

CPT features:

- the backrest remains in permanent contact with the user's back without changing position of the seat,
- the backrest can be locked in any position by means of a knob,
- backrest height adjustment is carried out by means of a knob fitted to the chair's back,
- seat depth adjustment is carried out by means of a knob fitted under the seat.

Kontakt features:

- the backrest remains in permanent contact with the user's back without changing position of the seat,
- the backrest can be locked in any position by lifting a lever,
- *Up&Down* function – backrest height adjustment uses a ratchet mechanism, which operates by moving the chair's back up on a concealed ratchet system within the back itself; once the maximum height is reached a further lift returns the chair back to the bottom of its height adjustment,
- *Anti-Shock* function protects the sudden impact of the backrest against the user's back; after the lock of the backrest & seat is released and the “free-floating” option is engaged, the backrest remains immobile; only when you lean back again the backrest move for- or backwards to allow your back.

SR SYSTEM RELAX a movement system ensuring a basic support and comfort during the movement when sitting in an executive armchair. It is provided by *Tilt* and *Multiblock* – both free-floating backrest mechanisms.

Tilt mechanism features:

- the seat and backrest jointly remains in permanent contact with the user's body,
- the backrest can be locked in one, upright position,
- adjustable backrest tilt force is adjusted by means of a knob fitted centrally under the chair mechanism. The user simply turns it in one direction to increase the back's resistance and in the opposite direction to lower the back's resistance. This works quite well and the knob can generally be adjusted while still seated in your office chair.

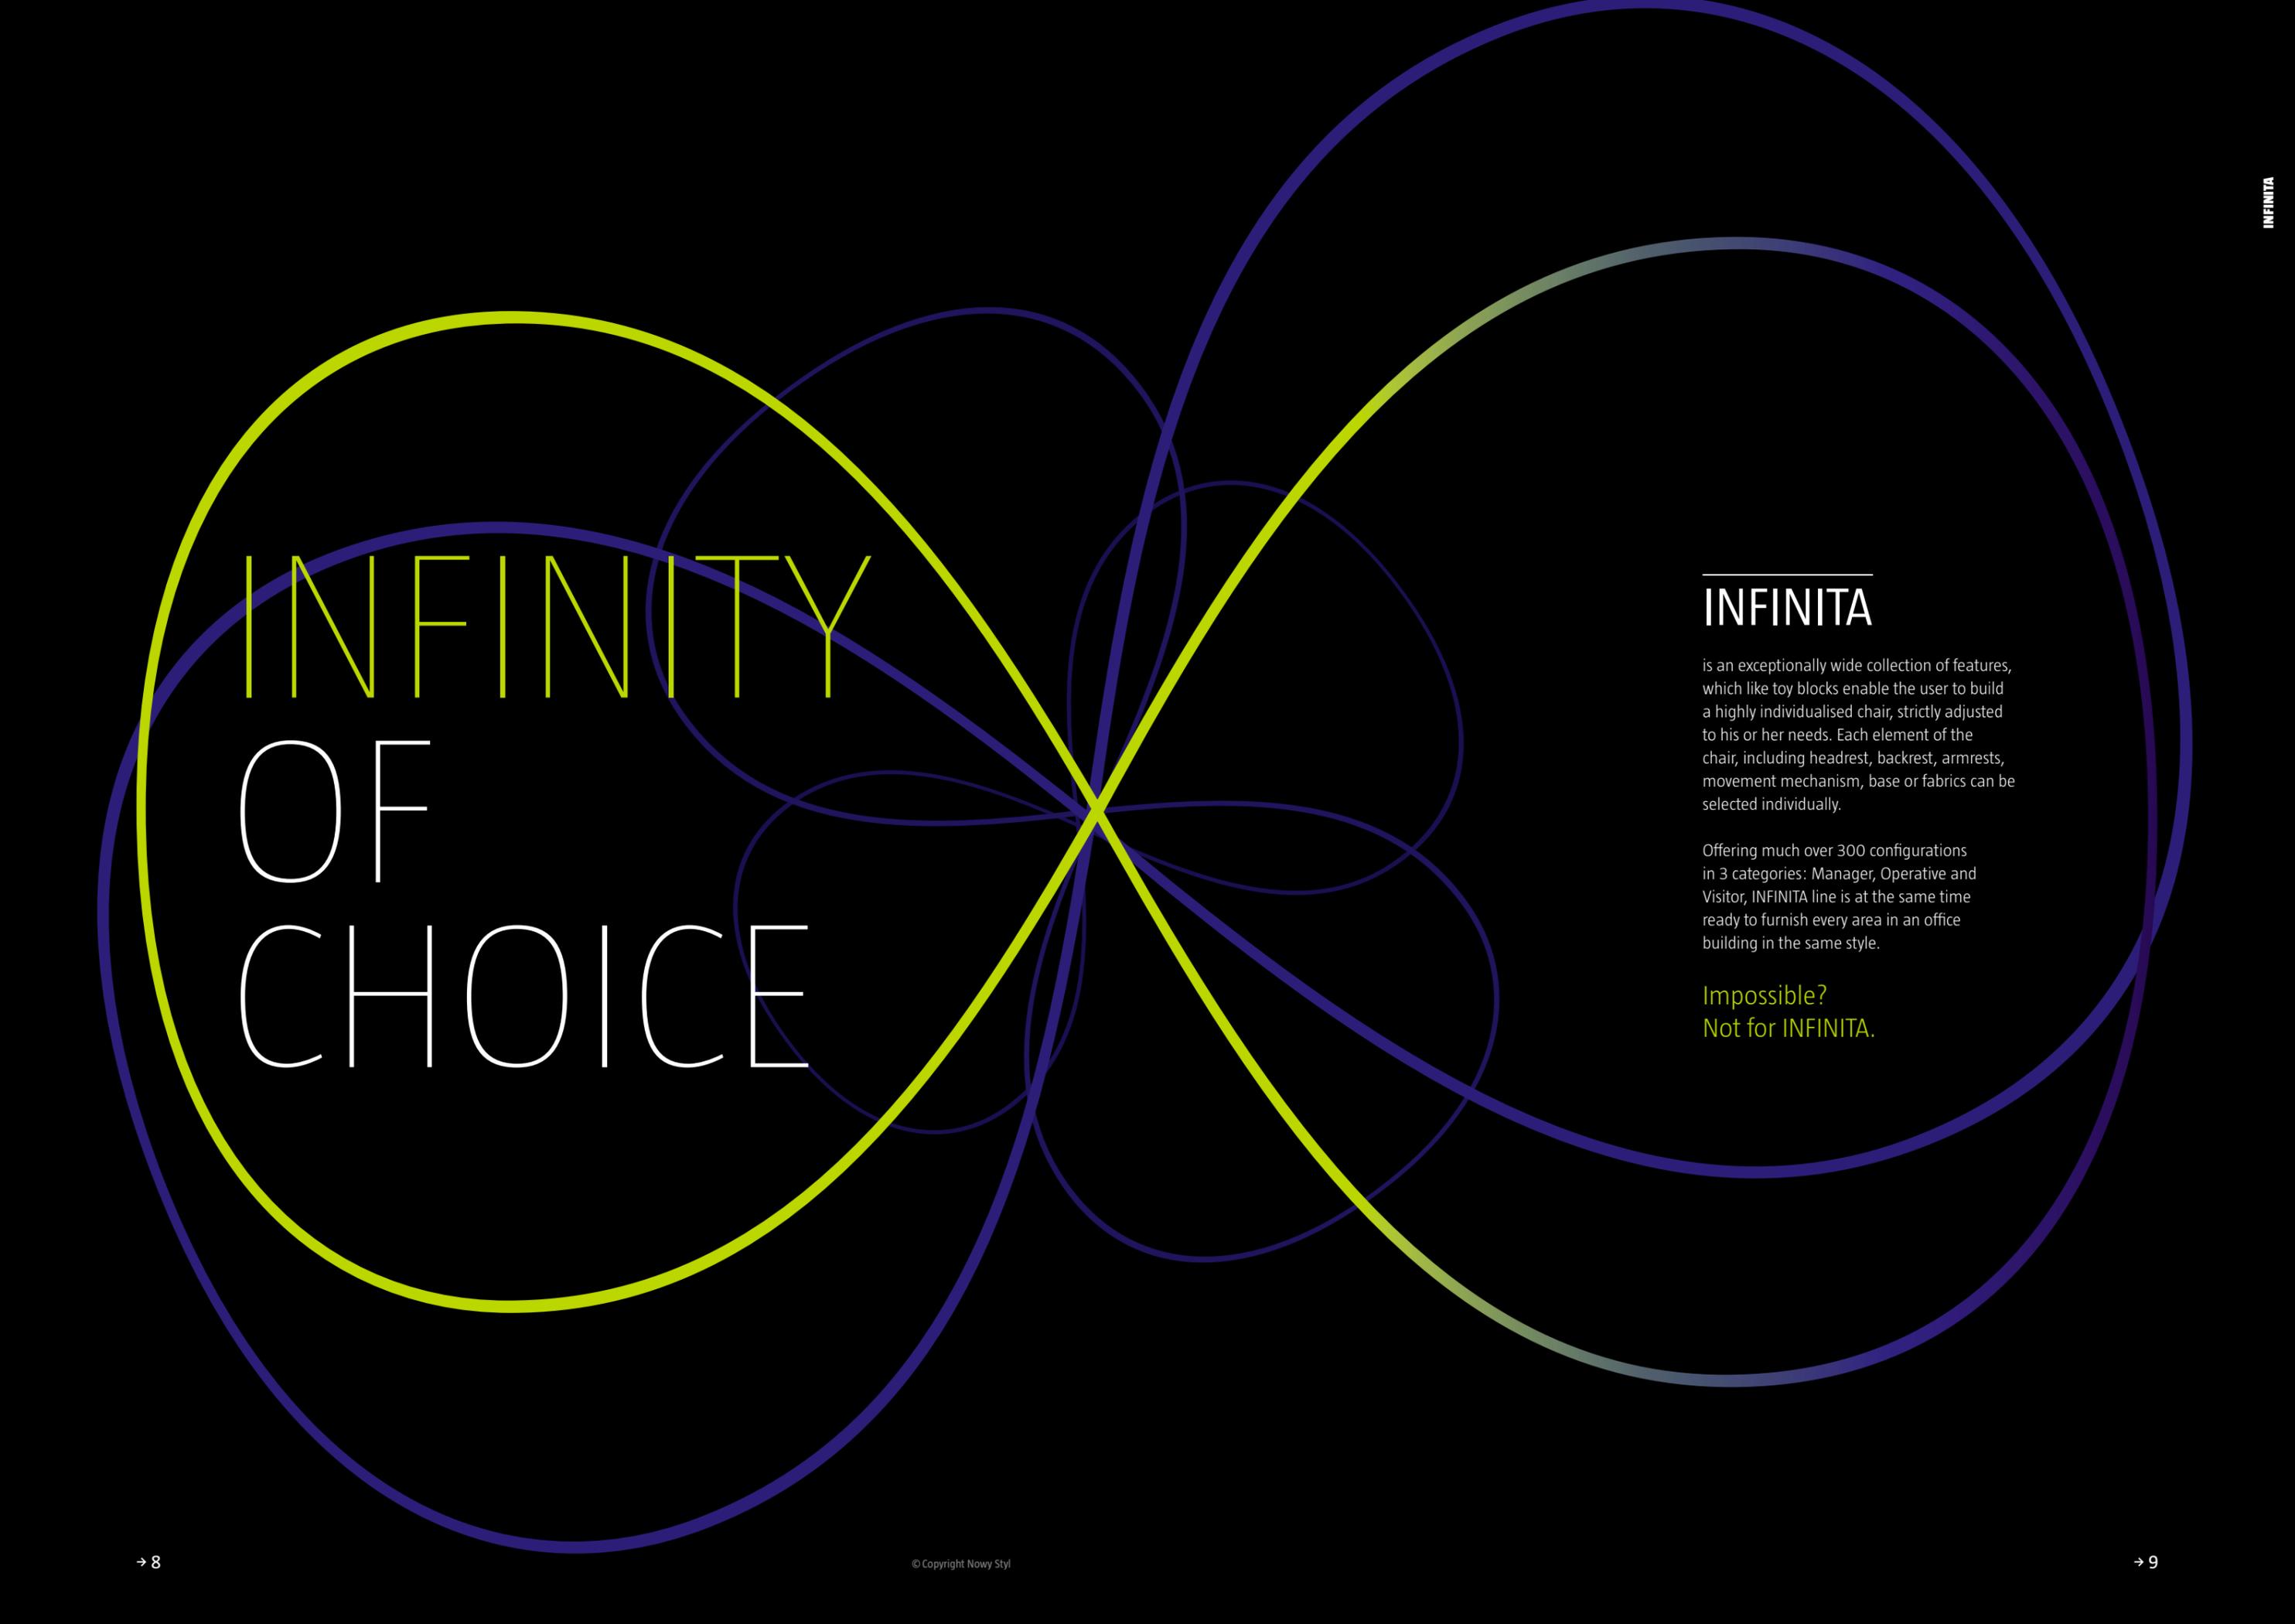

Multiblock mechanism features:

- the seat and backrest remains in permanent contact with the user's body,
- the backrest can be locked in one of five possible positions,
- adjustable backrest tilt force is adjusted by means of a knob fitted centrally under the chair mechanism. The user simply turns it in one direction to increase the back's resistance and in the opposite direction to lower the back's resistance. This works quite well and the knob can generally be adjusted while still seated in your office chair,
- *Anti-Shock* function protects the sudden impact of the backrest against the user's back; after the lock of the backrest & seat is released and the “free-floating” option is engaged, the backrest remains immobile; only when you lean back again the backrest move for- or backwards to allow your back.

SE SYSTEM ERGO an upgraded movement system ensuring a highly ergonomic support of the body and enabling highly recommended “dynamic seating”. It is provided by *Active-1*, *Active-IN*, *Epron Synchron*, *Epron Synchron Plus*, *I-marc 840*, *Duetto Synchron/MPD 165* and *Tatto* mechanisms – preventing back problems and promoting healthy posture during extended hours of seating.

System Ergo provides a wide range of ergonomic functions. Nevertheless, the functions differ slightly throughout the range of mechanisms (a precise list of functions provided by each mechanism is situated in the navigator):

- this mechanism allows the chair to follow the user's movements thanks to the synchronized tilting action of the seat and backrest,
- the seat and backrest can synchronically tilt in the rate 2:1 or be locked in selected position by lifting a lever, depending on uses' preferences,
- *Up&Down* function – backrest height adjustment uses a ratchet mechanism, which operates by moving the chair's back up on a concealed ratchet system within the back itself; once the maximum height is reached a further lift returns the chair back to the bottom of its height adjustment (except from the *Duetto Synchron/MPD 165*),
- *Anti-Shock* function protects the sudden impact of the backrest against the user's back; after the lock of the backrest & seat is released and the “free-floating” option is engaged, the backrest remains immobile; only when you lean back again the backrest move for- or backwards to allow your back,
- adjustable backrest tilt force – generally is adjusted by means of a knob fitted centrally under the chair mechanism or by means of a winch situated on the right side of the seat (*Epron Synchron Plus*) or knob on the right side of the seat (*Tatto*); the user simply turns them in one direction to increase the back's resistance and in the opposite direction to lower the back's resistance. The winch and knob fitted on the side of the chair work very well and they can generally be adjusted while comfortably seated in your office chair,
- seat sliding system – the seat depth is set up by a lever, the user is able to place the clenched fist between the edge of the chair's seat pad and the back of the knee.

INFINITY OF CHOICE

INFINITA

is an exceptionally wide collection of features, which like toy blocks enable the user to build a highly individualised chair, strictly adjusted to his or her needs. Each element of the chair, including headrest, backrest, armrests, movement mechanism, base or fabrics can be selected individually.

Offering much over 300 configurations in 3 categories: Manager, Operative and Visitor, INFINITA line is at the same time ready to furnish every area in an office building in the same style.

**Impossible?
Not for INFINITA.**

Infinita Manager is a line of highly functional, ergonomic armchairs designed for managerial offices.

A backrest upholstered on both sides, an innovative metal lumbar support in a mesh version or trendy ultra thin armrests make elegance an important feature of Infinita Manager line.

An adjustable headrest, armrests and lumbar support, as well as a seat sliding system make this armchair the right partner of the manager even during long hours of work.

- Sled base visitor version available.

FIRST RALLY ARMCHAIR FOR OFFICE

FORMULA

Design: NS Design Team
All rights reserved

A managerial armchair with ergonomically profiled, leather seat and back that allows to feel as comfortable as in a sports car. Clearly shaped silhouette gives the impression of managing a situation, force to act dynamically while the right hand searches for a gear lever. The decisive line of the armchair underlines a decisive character of its user and signals an uncompromising attitude when choosing good standards. Thanks to the ergonomic mechanism, it is easy to feel relaxed as if one were in a pit lane during one's lunch break.

A staff chair with a noble looking line of the back, resembling the shape of a diamond and extraordinary ergonomomy, guarantees comfort of everyday work in the office and at home. It livens up "ordinary" interiors and meets the most refined aesthetic needs. Gem excellently matches those who spend long hours at the desk. Comfortably profiled, double-sided upholstered back, additionally strengthened support of lumbar and advanced movement mechanism allow for dynamic sitting without feeling of tiredness.

@-motion is a key element of a comfortable and ergonomic workstation. An attractive design and numerous practical conveniences including: a comfortable, upholstered headrest, lumbar support, 3D adjustable armrests and backrest made of perfectly springy mesh fabric make this chair a frequently awarded, true bestseller.

On top of this, in the newest version the front of the backrest is additionally finished with fine leather, which gives the chair an outstanding character.

Apart from many options of regulation, this high-class chair is equipped in a modern movement system providing a healthy and dynamic position during long hours of work.
